EMAIL ANALYSIS

Analyze suspicious email attachments

Forward any suspicious email to our scanner address. We'll extract every attachment and analyze them in an isolated sandbox.

Still haven't received results?

Common issues:

- Invalid forwarding
- Missing attachment
- Delayed processing

HOW IT WORKS

1 Copy your scanner address

Upload an .eml file or paste the email content.

analyze@[domain].com

2 Forward the suspicious email

In your email client, open the suspicious email and forward it to your scanner address. Include the original headers when possible.

```
To:
analyze@[domain].com
Subject: Fwd: [original
subject]
— forward the entire
original message —
```

3 We extract and analyze attachments

We automatically extract and analyze all attachments from the forwarded email in a secure sandbox environment.

4 Receive results by email

Within 2–3 minutes, your scan results will be sent to you via email. You'll get a threat score, indicators of compromise, and a full file report.
